Putlook Report (February – April 2021)

A young nation is striving to fulfil the many aspirations of its youth. The average age of India's population is 27 years, and 50% of our people – that is 650 million – are of working-age. To empower this large populace with the jobs they need, it is important that the aspiring candidates understand the evolving employment landscape and align their strategies and build capabilities that make them worthy of those positions. All too often, the exercise of matching opportunities and skills demands reliable and actionable information; and there is an enormous dearth of this information today. It is also pertinent that Higher Education Institutions (HEIs) assimilate and analyse this information and align their course curriculum to ensure that their students are being counselled and groomed with the necessary skills.

Aligned with its vision of Making India Employable, over the last decade, TeamLease EdTech (formerly Schoolguru Eduserve) has built deep expertise in skilling (helping freshers acquire new skills) and upskilling/reskilling (helping the employed add more skills or new skills to their repertoire). The Career Outlook Report is our initiative to translate this capability into actionable intelligence which can help fresh job market aspirants and HEIs prepare their strategies.

The Indian job market has extreme information asymmetry – there is a considerable gap between the job market information and the information available to job seekers. The Career Outlook Report aims to bridge this gap and provide career-enhancing insights into job roles and skills the market requires and the types of courses that prepare job seekers to respond to market demand effectively.

The report has been prepared by meticulously bringing together employer surveys and current market information to quantify the "Intent to Hire" by employers, across eighteen sectors and fourteen cities across India. At TeamLease EdTech, we believe that this high-quality market intelligence keeps job seekers in good stead and helps India become more Employable.

Shantanu Rooj Founder and CEO, TeamLease EdTech

# Introduction

TeamLease EdTech is on a mission of Making India Employable. This report is our initiative to nurture insights that can help fresh job aspirants understand the trends and gain their foothold in the market and gain relevant skills. The TeamLease Group is known for its thought leadership and fact-based reporting of forward-looking job market trends for over a decade now. Our flagship reports cover employment sentiment, salaries and stipend trends and a wide variety of insights related to the job market. Our reputation for bridging information asymmetries in the Indian job market demanded devising a report that focuses on skills required to help freshers become employable and desirable for the current job openings.

COVID-19 has impacted businesses and jobs everywhere and has badly hit hiring activity. However, dark clouds have a silver lining. About 38% of all employers expressed their intent to hire freshers before the pandemic struck; this base has shrunk to 15% for the period February – April, 2021. But, the overall proportion of employers carrying out any kind of hiring (freshers or experienced) stands at a low of 27% today. Therefore, freshers still have a reason to cheer. Although there are fewer jobs than earlier, on the whole, they have been less disadvantaged compared to candidates with years of experience.

This report is intended to guide freshers and provide information on what to expect during the February – April, 2021 period from a job search perspective. It highlights the job roles in demand in the market and the essential skills (core and associated) required for those roles. The report also highlights the top skill-enhancing courses that can act as an employability booster for these roles. The report is intended to be a source of market information that helps freshers acquaint themselves with current market trends. And the knowledge of the right skills they can equip themselves with to gain fruitful employment. It shall also help Higher Educational Institutions understand the expectations of the industry and modify their curriculum accordingly.

# Glossary of terms

onthly Sales

**Intent to Hire / Hiring Intent:** is a measure which represents the percentage of employers likely to hire fresh graduates during the three-month time period that is in consideration.

**Core skills:** are the critical set of skills that enable a candidate to carry out a given job role. It is comprised of the functional and technical skills that the given job role demands.

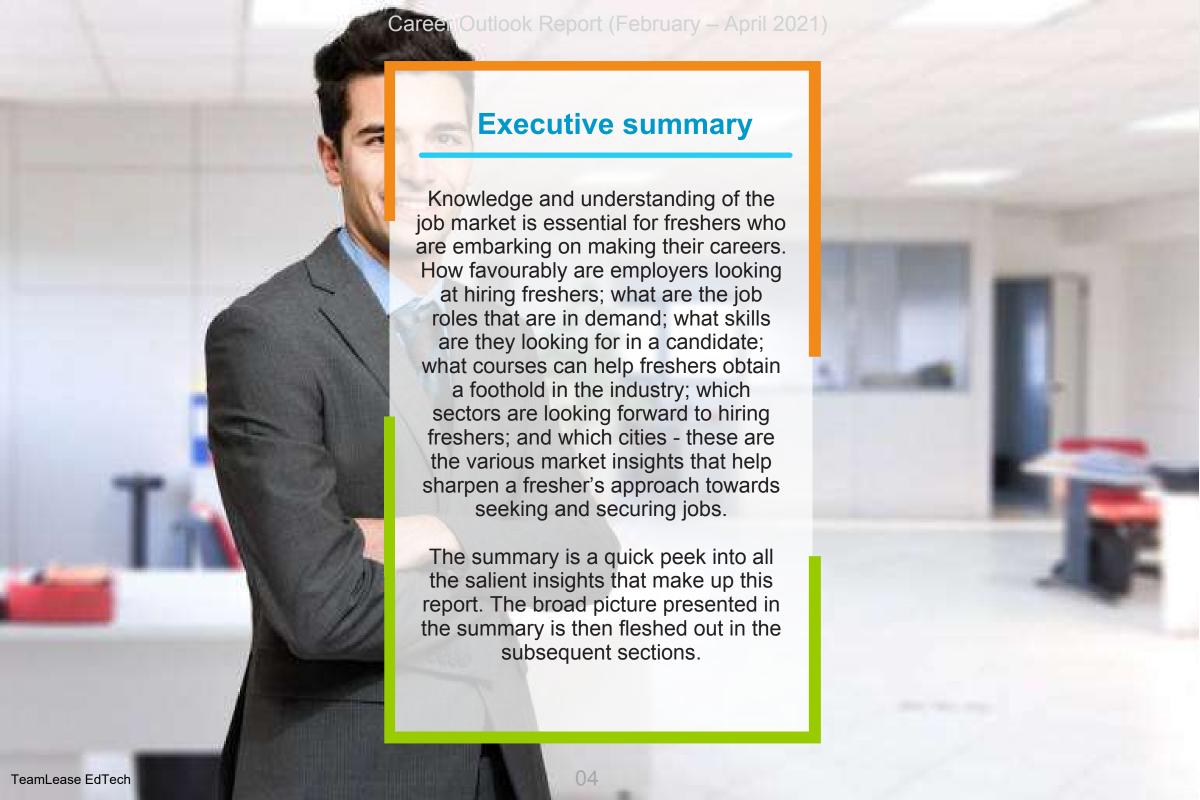

**Associated skills:** are the additional – mostly soft – skills that complete the entirety of skills a candidate must possess in order to perform satisfactorily in a given job role.

**Domain skills:** are skills that are specific to the technical domain within which a given job role exists. They could be a combination of functional and soft skills relevant for a given domain.

**Tech skills:** are technological skills that are relevant for a given domain and / or a given function, and are a subset of a broader, universal set of technological skills.

**Employability:** is the measure of a candidate to possess the skills and abilities to obtain a job, to perform satisfactorily in a job, and to make consistent progress in one's career.

**Hiring sentiment:** is the likelihood that an employer will hire people for their organization during a specified time period.

Executive Summary

TeamLease EdTech

Career Outlook Report (February – April 2021

The overall intent to hire (averaged across all categories put together) is 27%.
15% indicate they intend to hire freshers (0 – 1 year work experience) during February-April, 2021.

#### Intent to Hire / Hiring Intent-

is a measure which represents the percentage of employers likely to hire during the three-month period that is in consideration.

Source: Deduced from the TeamLease Employment Outlook Report and Employers' hiring preference across India in 2020, by work experience, December 2019, Statista

#### **Information Technology**

With the changing face of the global business outlook, companies are fast digitalising themselves - working to improve their agility and flexibility, increase automation and move to more real-time operations. Accelerating digital transformation efforts will likely take a rededication to improving cloud infrastructure, data and analytics capabilities, and cybersecurity. It will also likely require a renewed focus on business model transformation and ecosystem development. Growth opportunities abound for tech companies that execute on all forms of digital transformation, particularly in the areas of cloud, XaaS, data analytics, RPA, AI and ML, cybersecurity, and edge computing.

#### **Telecom**

Telecom companies will continue to provide the bedrock for other industries to recover and thrive and shape a new future for businesses and consumers on the strength of advanced wireless technologies such as 5G in 2021. The COVID-19 pandemic has accelerated consumers' willingness to experiment with their entertainment options too. The hard lines that used to exist between content and distribution channels are increasingly blurring. The coevolution of entertainment and technology is helping fuel new service offerings and entertainment bundles for consumers—necessitating new strategies and agile approaches for companies and creators.

#### **Ecommerce**

Rising internet penetration and the growing use of smartphones are predicted to contribute to the growth of the Ecommerce market in India. Ecommerce is at an all-time high. Lockdowns, travel bans, and retail closures forced the consumer online, and the world's largest retailers soon followed, in some cases selling direct to consumer (DTC) for the first time. Several companies are improving their operations through automated shipping and fulfillment. To better compete with marketplaces and retail giants, brands are also investing in richer, more personalized experiences. Humanizing their brand, so that it aids in customer retention, now is a top priority as acquisition costs rise, along with uncertainty in digital advertising.

#### **Logistics**

The domestic logistics sector is expected to continue at the core of the next stage of the battle against the virus in 2021 even as some easing in freight charges and container shortage, which hit the exports in the last quarter of the previous year, is also expected during the year. India's USD 215 billion logistics sector is one of the largest globally and has been growing at a CAGR of 10.5 per cent, according to a recent report. Digitisation of supply chain management with a focus on newer technologies like Blockchain, AI, Machine Learning, IoT are playing a critical driver for value creation. Growth in associated industries like Ecommerce has also been fueling the logistics sector.

#### **Healthcare**

Rising income level, greater health awareness, increased precedence of lifestyle diseases and improved access to insurance are the key contributors to growth for this segment. Health insurance is gaining momentum in India. Private sector has emerged as a vibrant force in India's healthcare industry, lending it national and international repute. Telemedicine is a fast-emerging trend in India. Major hospitals (Apollo, AIIMS, and Narayana Hrudayalaya) have adopted telemedicine services and have entered several public-private partnerships (PPP). Further, presence of world-class hospitals and skilled medical professionals has strengthened India's position as a preferred destination for medical tourism.

#### **Financial Services**

The country's financial services sector consists of capital markets, insurance sector and non-banking financial companies (NBFCs). The financial services industry is emerging from a year of whipsaw change. Banks, faced with unrelenting pressure on their margins, can see some relief in sight, while the capital markets are looking to a year of reduced volatility and improving financial conditions. The private equity industry is looking to continue its robust recovery, with middle market firms poised to play an important part. The asset management industry in India is among the fastest growing in the world. The Government of India has taken various steps to deepen reforms in the capital market. The Government has also approved 100% FDI for insurance intermediaries.

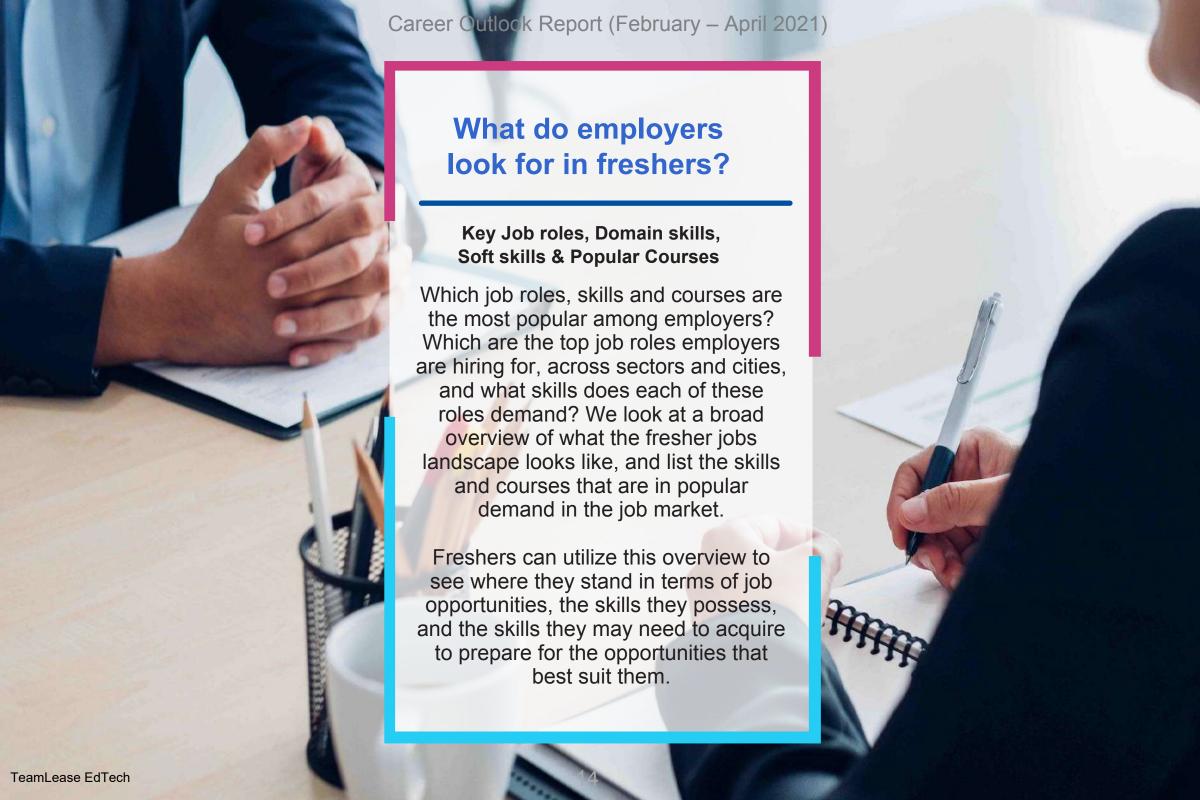

#### **Retail**

Indian retail industry has emerged as one of the most dynamic and fast-paced industries due to the entry of several new players. A good recovery of the economy, changing demographic profile, increasing disposable income and changing consumer tastes are driving the growth in the organised retail market in India. Retail would add about 39 Mn Square feet of space by 2022. Collective efforts of financial houses and banks with retailers are enabling consumers to go for durable products with easy credit. Govt has allowed 100% FDI in single brand retail and 51% FDI in multi-brand retail in India. As per a recent report, traditional retail will hold a 75% share of the total retail market in 2021.

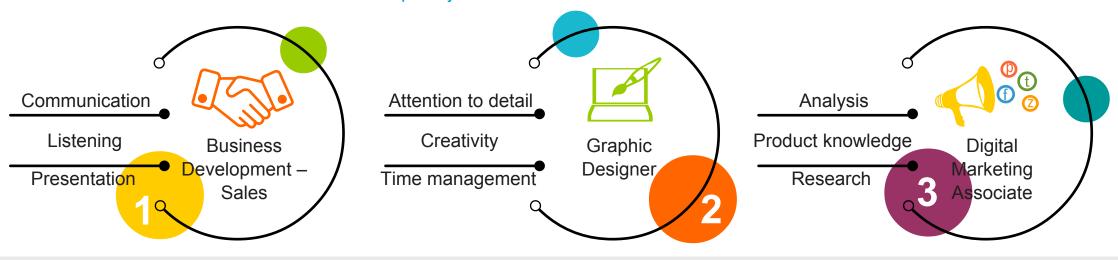

#### **Education**

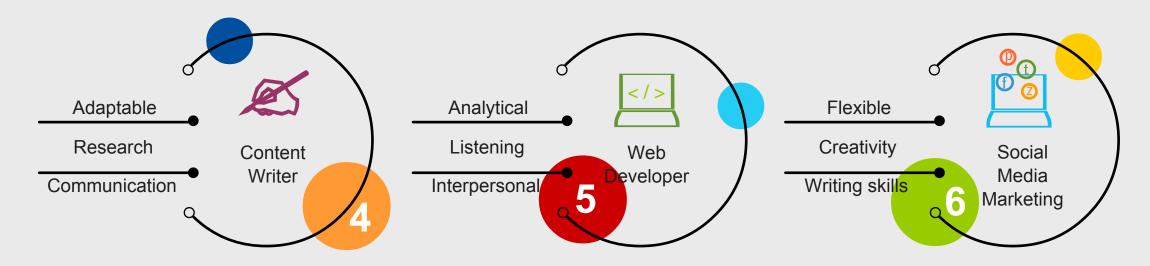

India has over 250 million school going students, more than any other country. It also has one of the largest networks of higher education institutions in the world. Number of colleges and universities in India reached 55000 and 993, respectively, in FY20. Education sector in India remains to be a strategic priority for the Government. The Government has allowed 100% Foreign Direct Investment (FDI) in the education sector. The Cabinet chaired by the Prime Minister, Mr Narendra Modi approved the National Education Policy 2020, making way for large scale, transformational reforms in both school and higher education sectors. The policy is built on foundational pillars of Access, Equity, Quality, Affordability and Accountability, and is aligned with the 2030 Agenda for Sustainable Development.

# **COVID-19's impact** on hiring sentiments

COVID-19 affected businesses, and therefore jobs, in ways that we had never imagined. The effect of the pandemic on the hiring sentiments of employers was, therefore, equally unprecedented. It is important for freshers to obtain clarity on how these sentiments are likely to develop over the next three months.

This section traces the fluctuation of employer sentiments during different stages of the pandemic – prepandemic, the lockdown stage, and the unlock stages. The improving sentiment levels are indicators that the near-future looks much better for freshers than the past 11 months.

### **COVID's impact on hiring sentiments**

The Information Technology sector has been hiring continuously throughout the pandemic. The hiring intent dropped from 51% (pre pandemic) to 12% (during lockdown). However, it has steadily increased since, and is estimated to be 24% for February - April, 2021.

Similarly, the overall hiring intent of employers dropped from **38%** (before the pandemic) to **6%** (lockdown). The intent to hire has steadily increased since, and is estimated to be **14%** during February - April, 2021.

Note: HY refers to Half year and Qtr refers to Quarter

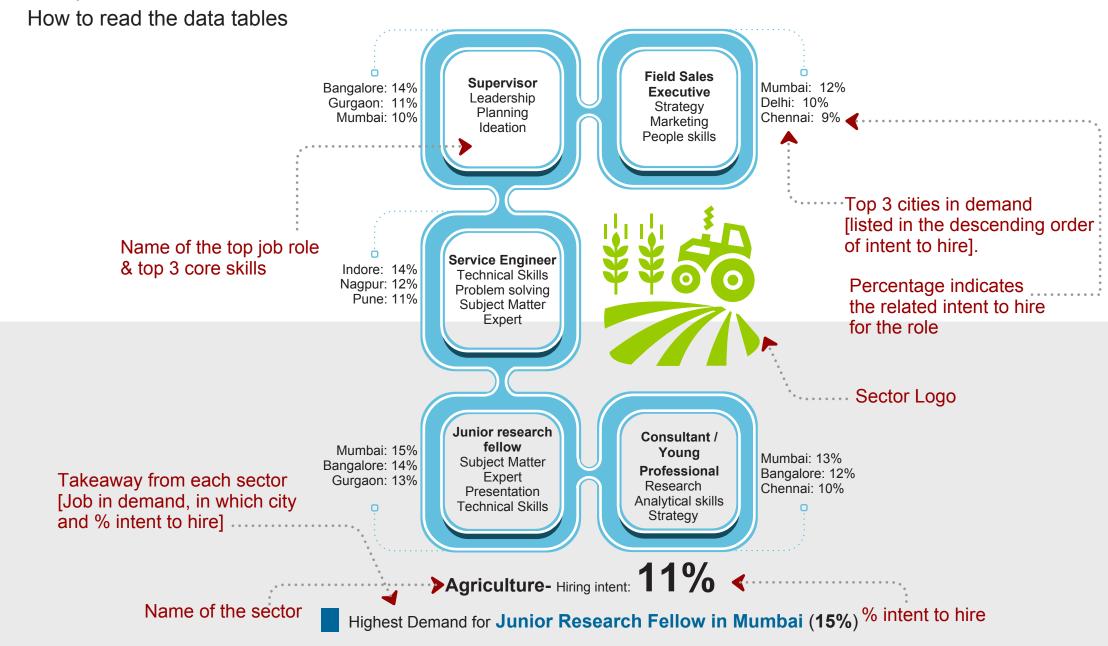

### **Key takeaways**

- 1. The pandemic is an opportunity for freshers who are willing to equip themselves with the latest technological and soft skills for better employability.
- 2. The Information Technology and Ecommerce sectors consistently hire freshers, and lead the sectors on hiring intent for the period February-April, 2021.
- 3. Sectors such as Travel & Hospitality are still impacted by the pandemic and therefore might have only minimal job opportunities for freshers at present.
- 4. Digital is the way to go. Roles such as Web development and Mobile app development are high in demand across sectors.
- 5. Bangalore, Mumbai, Delhi, Chennai and Hyderabad offer the most employment opportunities amongst the cities covered.
